The ECHOS Observation Tool was developed to provide feedback to teachers on their use of instructional strategies that promote children’s science process thinking skills. This browser-based tool can be used on a smartphone, tablet or laptop to capture interactions between a teacher and a small group of children. Observations may take place in a variety of settings, such as peer-to-peer, mentor coaching, or supervision.

The tool also provides a set of questions related to fidelity, the degree of adherence to the ECHOS® program.
