

Hands-On Afterschool Science Curriculum

APEX Science brings the excitement of hands-on science exploration to children in afterschool programs. Developed with funding from the National Science Foundation, APEX Science also includes a training model for staff of local community-based organizations and schools that provide afterschool care.

The APEX Science curriculum addresses age-appropriate science concepts, including life science, nature of science, energy, processes that shape the Earth, nature of matter, environmental science, forces of motion, and Earth/space science. The 32 inquiry-based lessons provide opportunities for indoor and outdoor investigations throughout the school year.

Each APEX Science unit includes lesson-specific background information for activity leaders, an Activity Leader Card that provides detailed instructions for delivering each thematic hands-on activity, and a set of laminated Expedition Learning Cards for children, all designed to meet the needs of afterschool programs.

Spanish edition now available!
